Stakeholders and Concerns

	Stakeholder	Main Concerns
1	**Applicant**	Applicants want to find a good job or internship, upload their CV without any hassle, and hear back on whether the company accepted or rejected them. They also want to know their personal information is kept safe.
2	**Recruiter**	Recruiters want to post job openings, find people with the right skills, go through CVs, and set up interviews without losing time on the process.
3	**Platform Administrator**	The admin wants everything to run smoothly, fake job posts removed, users managed, and any problems on the platform solved quickly.
4	**Email Service**	The email service should deliver notifications on time, such as when someone applies for a job or receives an interview invitation. Emails shouldn't fail or show up late.
5	**CV Parsing API**	The CV parser should read CVs accurately and pick out the key details like skills, education, and experience. It should also handle different CV formats.
6	**Hiring Company**	The company wants to find the right people for its roles, save time during hiring, and make sure its recruiters can manage applications easily.
